# Tree Crops – Apples at Stanthorpe

**Grower's comments:**  
**Apple Testimony March 07**

*"I am pleased to advise that this year we trialed Twin N on some of our apple blocks.*

*Two blocks were planted in September 2006. They were on M26 rootstock and to date (5 months later) we have applied no other N source. Twin N was applied a little late, after full leaf development. The young trees are now about 2m high. They were planted at 2500 trees per ha.*

*In another block (pink lady on M26, planted in 2001) we had always had some difficulty with respect to adequate nutrition. We applied Twin N as the only N source and the trees have finally responded and seem to be cropping well.*

*As I mentioned to you the results are such that we will use Twin N on the whole orchard next year. We will trial application through fertigation as you suggested".*

Regards,  
Ben Darbyshire
